

Powerscan PBT9500 Image Capture

With the default setting of the PBT9500 image capture will not work. The reason for this is that image capture is only supporting 1 gun & 1 base, but the default setting allow up to 7 guns. Set “*max number of clients*” to **1** to enable image capture with [Aladdin](#) and other tools following the image capture protocol.

max number of clients **01**

(Image Capture Mode)

max number of client **07**

(Default Mode)
